

Fast Track To Passwordless

Protect your entire organisation with FIDO2 authentication or any other authentication method of your choice within 7 days.

Start using passwordless MFA everywhere.

Our Mission

To completely redefine the paradigm of user access security deployments by introducing secure, frictionless access to any application within minutes.

How Our Mission Affects

87%

Reduced implementation and integration costs

82%

Reduced IT specialist's engagement

100%

Reduced software developer

"We are faced with new challenges every day. We must always be one step ahead of the attackers and know what they are going to do before they do it. We are convinced that the Secfense User Access Security Broker will bring security to a new level, both for those working at the office and from home. For us, working with Secfense is an opportunity to exchange experience with developers who put great value on out-of-the-box thinking."
